

From CSV files

Prof. Dr. Nicolas Meseth

Loading data from a CSV file is simple with the `{readr}` package:

```
orders <- read_csv("data/orders.csv")
```

```
#> # A tibble: 2,874 x 68
```

```
#>      order_id name  order~1 app_id created_at      updated_at      test  curre
```

```
#>      <dbl> <chr>  <dbl>  <dbl> <dtm>      <dtm>      <lgl>  <db
```

```
#> 1      1.13e12 B1014      1014 580111 2019-05-24 12:59:16 2019-06-19 13:23:26 FALSE 9
```

```
#> 2      1.13e12 B1015      1015 580111 2019-05-24 13:09:08 2019-06-21 14:40:07 FALSE 32
```

```
#> 3      1.13e12 B1016      1016 580111 2019-05-24 13:22:41 2019-06-21 12:35:23 FALSE 30
```

```
#> ...
```
