

From RDS files

Prof. Dr. Nicolas Meseth

Load an RDS-file

With the `readRDS()` function, we can load data from R's proprietary data format:

```
orders <- readRDS(file = "data/orders.rds")
```

If the original data was a tibble, as in this case, the loaded data will be, too:

```
orders
```

```
# A tibble: 2,874 x 68
```

Saving data to .rds format

We can save any data frame to an `.rds` file using the `saveRDS()` function:

```
saveRDS(orders, file = "data/orders.rds")
```
